

Manhattan Cruise Terminal Dredging

NEW YORK CITY, NEW YORK

PROJECT HIGHLIGHTS

- Cashman Dredging supplied all plants, barges, scows, materials, equipment, supplies, labor, transportation, fuel, power, water, surveys and all other related work necessary for the complete performance of the dredging and HARS placement of the dredging material.
- Because the Terminal is extremely busy, Cashman planned dredging work around the Terminal's Ship Schedule, as well as coordinated with all other subcontractors and nearby construction.
- Additionally, there was ongoing work at nearby piers including underwater diving operations, so the Cashman team had safety as its first priority.
- Cashman's custom-developed systems allowed precise placement of dredged materials to the HARS site(s) offshore of New Jersey.
- The second season (Fall 2015) activity included dredging of Berths 1 through 5, as well as the Berth Channel Area.
